TO: Minerals File

FROM: Tom Munson, Reclamation Hydrologist 

RE: Site Inspection, American Consolidated Mining Company, Herat Mine, E/045/023, Tooele County, Utah 

Date of Inspection: July 10, 1996  
Conditions: Sunny, hot  
Participants: Tom Munson and Tony Gallegos, DOGM

Purpose of Inspection: To inspect site

What was considered to be an extension of the Clifton Exploration Project, was discovered to be significant additional disturbance. They have put in a trench, widened the road, built a pad with a powder magazine, as well as stockpiled some ore. They are currently mining or mucking a trench. The disturbance associated with this was paced off. We will have to talk to Dan Proctor about additional bond money to cover this additional disturbance.

The knoll where the Herat mine is located is on the west side of the knoll. There is now a road that has been constructed around that knoll running from the north around to the east side.

At the portal, there was a fan running, several air compressors, two trailers, other additional mining related equipment and the pad area. The pad is probably @50 x 100 feet associated with the portal face up. With the additional roads, etc., there is probably another 1-2 acres of disturbance associated with it. If we call this disturbance part of the Herat mine, there are several acres of additional disturbance.

In addition to the original permit, they have constructed two other large trenches. In addition to that, there is a spur here and there, but insignificant compared to the trenches.
